- This cardholder has a chronic inflammatory disease and has to take injections on a regular basis. For this reason the cardholder carries prefilled syringes or pens.
- The medication should not freeze or be stored at temperatures above 25°C.
- The medication should be kept in the original box to protect from light.
- The contents of the syringe/pen are not under pressure and therefore constitute no risk during flights.
- The medication is NOT a narcotic or controlled substance.
